

Jatronic Adaptor AB12 models

The safe connection between communication radio and headset

The AB12 Adaptor from Jatronic is designed and developed for rough handling in extreme environments. Years of experience and feedback from users has helped us to create what we believe to be the best adaptor on the market. It is easy to operate even with gloves and a rugged clip provides good attachment to clothes. The adapter can be connected to any headset with dynamic microphone and the Nexus TP120 4-p. jack-plug.

Box developed for rough handling
