

Please complete the form and enclose with product.

Checklist

Below are some of the most common faults.

Batteries

- Replace the old batteries with brand new ones
- Make sure both batteries + and - are the correct way round
- Clean battery contacts of any corrosion/dirt/dust

Moisture

- Check that moisture has not built up inside the ear cups. If there is moisture in either cup, remove the hygiene kit and leave the headset to dry out overnight. Avoid leaving the headset in a hot place as it could damage the product.

If the problem persists after following the steps, fill out the form below and return it with the product, our technical team will assess the product, diagnose the fault and contact you with further information.
